INSIDE THIS ISSUE

Welcome to the latest issue. Inside, you'll find an array of articles about how we can help you further to plan, grow, protect and preserve your wealth. As we all know, the ultimate goal money can buy is financial freedom.

Volatility fluctuates based on where we are in the economic cycle, but it is a normal feature of markets that investors should expect. From the unfathomable Brexit playbook and the continued prominence of populist ideology, to unconventional US foreign policy and the retirement of Draghi, the highly respected European Central Bank president, uncertainty prevails. On page 6, we consider why it is essential not to panic and to keep a perspective when markets are turbulent.

On page 5, we look at passing on wealth and why it is a sensitive subject, not just because of the financial complexities of it all, but also the emotion and family politics involved. Having built up their business or wealth, many families often wish to enjoy it whilst also ensuring that it is passed on to the next generation in their families. But some people find the idea of discussing passing on wealth uncomfortable.

Today, you've got a number of options and permutations available when it comes to what to do with your pension in retirement. But lots of choice can also mean increased confusion. Your retirement might seem like a far-off prospect, but knowing how you can access your pension pot can help you understand how best to build for the future you want. Turn to page 10 to look at your options.

Also inside this issue, we suggest the 'top 5' list of tax planning areas to consider now; ask 'Should you invest into a pension or an ISA?'; and explain how to prepare your portfolio for inflation. A full list of the articles featured in this issue appears opposite.

WANT TO DISCUSS YOUR REQUIREMENTS?

We hope you enjoy this issue. And to keep things in perspective, the journey of a thousand miles must begin with a single step. We think that sums up what we do very nicely. Thank you for your continued support. To discuss your situation, please contact us – we look forward to hearing from you.

SHOULD I INVEST INTO A PENSION OR AN ISA?

Investors looking for tax-efficient ways to build a nest egg for retirement often look to both Individual Savings Accounts (ISAs) and pensions. Tax-efficiency is a key consideration when investing because it can make a considerable difference to your wealth and quality of life.

However, the type of investment and tax-efficiency is a common dilemma faced by many people. Which is better – an ISA or a pension? In truth, there's a place for both, and it's easy to argue the case for each of them.

ISAs allow you to invest in the current 2019/20 tax year up to £20,000 each year, providing tax-efficient growth and income. Withdrawals are tax-free because the money paid in was from after-tax income.

Pensions are also very tax-efficient. All contributions within allowance limits receive tax relief from the Government payable at up to your highest rate of tax. For example, it would only cost a basic-rate taxpayer £80 to contribute £100 into their pension because they would receive tax relief at 20%. This is added to the £80, representing the 20% tax they would have paid if they had earned that £100.

For higher earners, it is even better, with higher-rate taxpayers only needing to contribute £60 in order to boost their pension fund by £100, and additional-rate taxpayers only needing to pay £25 (assuming they have at least £100 of income taxed at those rates).

Tax relief is given on personal contributions up to 100% of your earnings (or £3,600 if greater).

If total contributions from all sources, including your employer if applicable, exceed the annual allowance (£40,000 for most people but can be less for higher earners or those who have flexibly accessed a pension), you will suffer a tax charge on the excess funding if it can't be covered by unused allowances from the previous three years.

So, pensions give you tax relief on money going in, but when it comes to drawing on your pension, tax will be payable at your marginal rate apart from the tax-free lump sum (normally 25% of your benefits).

ISA investments don't allow for tax relief on the money being invested, but they do give you total tax exemption on any gains made within the ISA. So with an ISA, when you come to withdraw funds, you will not pay a penny of income or Capital Gains Tax.

Put simply, the right option will be different for different people. There will be some for whom the right answer is a pension, others for whom the right answer is an ISA. If it was clearly one or the other, it would be far simpler.

An important point to remember is that you cannot normally access your pension until age 55, whereas your ISA is accessible any time. ◀

Goldilocks economy

HOW TO PREPARE YOUR PORTFOLIO FOR INFLATION

Very low or very high inflation is damaging to the economy. The aim is usually to try and keep the Consumer Prices Index (CPI) at 2% in order to maintain a 'Goldilocks Economy' – not too hot, not too cold.

Over time, inflation can reduce the value of your savings because prices typically go up in the future. This is most noticeable with cash. Inflation is bad news for savers, as it erodes the purchasing power of their money. Low interest rates also don't help, as this makes it even harder to find returns that can keep pace with rising living costs. Higher inflation can also drive down the price of bonds. These become less attractive because you're locked in at interest rates that may not keep up with the cost of living in years to come.

OFFSET INFLATION LOSS

When you keep your money in the bank, you may earn interest, which balances out some of the effects of inflation. When inflation is high, banks typically pay higher interest rates. But once again, your savings may not grow fast enough to completely offset the inflation loss.

The UK's CPI measure of inflation tracks how the prices of hundreds of household items change over time, and there are several different factors that may create inflationary pressure in an economy.

STRONGER ECONOMIC GROWTH

Rising commodity prices can have a major impact, particularly higher oil prices, as this translates into steeper petrol costs for consumers. Stronger economic growth also pushes up inflation, as increasing demand for goods and services places pressure on supplies, which may in turn lead to companies raising their prices.

DETRIMENTAL PERFORMANCE IMPACT

The falling pound since Britain's vote to leave the EU contributes to higher inflation in the UK, as it makes the cost of importing goods from overseas more expensive.

The impact of inflation on investments depends on the investment type. For investments with a set annual return, such as regular bonds, inflation can have a detrimental impact on performance – since you earn the same interest payment each year, it can cut into your earnings.

IMPACT ON STOCKS AND SHARES

For stocks and shares, or equities, inflation can have a mixed impact. Inflation is typically high when the economy is strong. Companies

may be selling more, which could help their share price. However, companies will also pay more for wages and raw materials, which will impact on their value. Whether inflation will help or impact on a stock can depend on the performance of the company behind it.

On the other hand, precious metals like gold historically do well when inflation is high. As the value of the pound goes down, it costs more pounds to buy the same amount of gold.

INFLATION RISK INDEXATION

There are some investments that are indexed for inflation risk. They earn more when inflation goes up and less when inflation goes down, so your total earnings are more stable. Some bonds and annuities offer this feature for an additional cost.

Index-linked gilts are government bonds whose interest payments and value at redemption are adjusted for inflation. However, if they're sold before their maturity date, their market value can fall as well as rise and so may be more or less than the redemption value paid at the end of their terms. ◀

PUTTING A STRONG INVESTMENT STRATEGY IN PLACE

Inflation is a market force that is impossible to completely avoid. But by planning for it and putting a strong investment strategy in place, you might be able to help minimise the impact of inflation on your savings and long-term financial plans. Healthy, wealthy and well advised

FINANCIAL COMPLEXITIES OF PASSING ON WEALTH

Passing on wealth is a sensitive subject, not just because of the financial complexities of it all, but also the emotion and family politics involved.

Having built up their business or wealth, many families often wish to enjoy it whilst also ensuring that it is passed on to the next generation in their families. Passing on what you have accrued in the most efficient way is of paramount importance. But some people find the idea of discussing passing on wealth uncomfortable.

MAKING DECISIONS ON YOUR BEHALF

It is often said about those people who are healthy, wealthy and well advised that they rarely pay Inheritance Tax – or rather, their estates do not. As part of the planning process, it is essential to make certain that you have a current Will in place. Your Will ensures that when you die, your wishes are clear.

Also, give consideration to arranging a Lasting Power of Attorney, a legal document that lets you appoint one or more people to help you make decisions or to make decisions on your behalf.

YOUR WEALTH OVER THE YEARS

Dying without a Will could leave your partner without any rights or protection if you're not married. If you don't have close family, your estate could pass to a distant relative you do not wish to benefit or do not know, or even to the Crown. If you already have a Will, you should consider reviewing it at least every five years.

It might be the case that you have built up your wealth over the years, or perhaps you have had a windfall or inherited a sum of money. Whatever your individual circumstances, setting up a trust could be the right decision for the future, with the added flexibility of tax-efficiency.

POTENTIAL INHERITANCE TAX LIABILITY

With our help, you can work out if you have a potential Inheritance Tax liability. Once we have this information, we'll make recommendations about how you could reduce your Inheritance Tax by reviewing all the different allowances and options available. Funding your expenses from

assets that are subject to Inheritance Tax will also help reduce your taxable estate.

A trust may also help you protect your wealth, making sure that the people who matter to you most are the ones who benefit in a way that you want them to at the right time. Even though the current climate is less favourable, following major Inheritance Tax reform in 2006, there are still a number of instances where trusts can be created without an immediate Inheritance Tax charge.

SIGNIFICANT DEGREE OF ASSET PROTECTION

Putting taxation to one side for the moment, the separation of legal ownership of an asset from its beneficial ownership creates great flexibility and offers a significant degree of asset protection. This can be valuable in a range of situations, such as providing for children or grandchildren, dealing with assets on death and on marriage breakdown.

In thinking about passing wealth down the generations, another concern is whether your property may have to be sold to pay for nursing home fees. If a couple, whether or not married, own their home jointly, then it is normally possible to ensure that if the longer-lived member of the couple eventually has to go into a home, the share of the house which was owned by the other member of the couple is ring-fenced by means of a trust, so at least that part of the value of the house does not end up going on home fees.

TAX LEGISLATION AND ALLOWANCES CONSTANTLY EVOLVE

If you are a farmer, you are probably aware that agricultural property relief on agricultural property, including the farmhouse, can be claimed to reduce or avoid an Inheritance Tax bill after death. You should also be

aware, though, that if before your death you retire, in the sense that you are no longer actively farming the land yourself, then the relief may be lost, particularly on the farmhouse.

Making sure that you can pass on your wealth to the right people, at the right time, will be one of the most valuable things you can do for yourself and your family. Tax legislation and allowances are constantly evolving, so it is essential to review your financial and investment arrangements to ensure unexpected tax bills won't jeopardise any wealth intended for your family. ◀

Choppy waters, not full-on gale

WAIT FOR THE BAD WEATHER TO
PASS AND STAY THE COURSE

Volatility fluctuates based on where we are in the economic cycle, but it is a normal feature of markets that investors should expect. When stock markets start correcting, daily injections of bad news may sound as though it will never end. This can spark anxiety, fuel uncertainty and trigger radical decisions in even the most seasoned investors.

From the unfathomable Brexit playbook and the continued prominence of populist ideology, to unconventional US foreign policy and the retirement of Draghi, the highly respected European Central Bank president, uncertainty prevails. But it's essential not to panic and to keep perspective when markets are turbulent.

Whether it's rough seas or a volatile stock market, the same rules apply. When storms rock the boat, don't jump ship. Wait for the bad weather to pass and stay the course.

Here are some strategies to consider when volatility strikes.

KEEP CALM - SHORT-TERM VOLATILITY IS PART AND PARCEL OF THE INVESTMENT JOURNEY

Markets can fluctuate depending on the news flow or expectations on valuations and corporate earnings. It is important to remember that volatility is to be expected from time to time in financial markets.

Short-term volatility can occur at any time. Historically, significant recoveries occur following major setbacks, including economic downturns and geopolitical events.

While headline-grabbing news can affect short-term market sentiment and lead to reductions in asset valuations, share prices should ultimately be driven by fundamentals over the long run. Therefore, investors should avoid panic-selling during volatile periods so that they don't miss out on any potential market recovery.

REMAIN INVESTED - LONG-TERM INVESTING INCREASES THE CHANCE OF POSITIVE RETURNS

When markets get rocky, it is tempting to exit the market to avoid further losses. However, those who focus on short-term market volatility may end up buying high and selling low. History has shown that financial markets go up in the long run despite short-term fluctuations.

Though markets do not always follow the same recovery paths, periods after corrections are often critical times to be exposed to the markets. Staying invested for longer periods tends to offer higher return potential.

BY COMBINING ASSETS WITH DIFFERENT CHARACTERISTICS, THE RISKS AND PERFORMANCE OF DIFFERENT INVESTMENTS ARE COMBINED, THUS LOWERING OVERALL PORTFOLIO RISK. THAT MEANS A LOWER RETURN IN ONE TYPE OF ASSET MAY BE COMPENSATED BY A GAIN IN ANOTHER.

STAY DIVERSIFIED - DIVERSIFICATION CAN HELP ACHIEVE A SMOOTHER RIDE

Diversification basically means 'don't put all your eggs in one basket'. Different asset classes often perform differently under various market conditions.

By combining assets with different characteristics, the risks and performance of different investments are combined, thus lowering overall portfolio risk. That means a lower return in one type of asset may be compensated by a gain in another.

STAY ALERT - MARKET DOWNTURNS MAY CREATE OPPORTUNITIES

Don't be passive in the face of market declines. When market sentiment is low, valuations tend to be driven down, which provides investment opportunities. In rising markets, people tend to invest as they chase returns, while in declining markets people tend to sell. When investors overreact to market conditions, they may miss out on some of the best-performing days.

Although no one can predict market movements, the times when everyone is overwhelmingly negative often turn out to be the best times to invest.

INVEST REGULARLY - DESPITE VOLATILITY

Investing regularly means continuous investment regardless of what is happening in the markets.

When investors make fixed regular investments, they buy more units when prices are low and fewer when prices are high. This will smooth out the investment journey and average out the price at which units are bought. It thus reduces the risk of investing a lump sum at the wrong time, particularly amid market volatility.

The longer the time frame for investment, the better, because it allows more time for investments to grow, known as the 'compounding effect'. ◀

Retirement longevity

YOUR DESTINY IS NOW IN YOUR OWN HANDS

If you are in your 50s or 60s, your thoughts are probably turning towards retirement. When should you retire? How much money do you need?

In trying to answer these questions, you face a problem. Because of longevity trends, we are on average living longer. With longevity increasing, your wealth may have to provide you and your spouse or partner with an adequate income for 30 or even 40 years.

Britons aged 30 today have a 50% chance of living to more than 100, while 50-year-olds have an even chance of reaching 95^[1]. Longer lifespans, however, raise financial challenges – for individuals as well as for families and society.

The idea of a retirement lasting many decades may seem appealing, but longer retirements mean more years of living off your pension and savings. Will yours be enough?

EXTRA BENEFIT OF COMPOUND INTEREST

How much money you need to save depends on when you actually start saving and how much you want to save in total. The earlier you and potentially your employer (if they match your contributions) start adding to your pension pot, the less you will need to save each month because the cost is spread over a longer period.

Moreover, if you start saving earlier, your funds will accrue the extra benefit of compound interest throughout the duration of your savings. Making money from the interest means you can actively save less but still end up with the same amount.

MUCH MORE FREEDOM AND FLEXIBILITY

The good news is that changes to pensions also now mean you have much more freedom and flexibility over how to take your benefits – whether as tax-free cash, buying an income for life, leaving your pension fund invested while drawing an income, or a combination of all these options.

Unless you believe the Government is likely to become more generous with the State Pension and other retirement benefits, individuals will

almost certainly need to save more to enjoy the standard of living they would like in retirement.

BUILDING A RETIREMENT NEST EGG

Over the last few decades, employer pensions have become generally less generous. Today, people starting a new job in the private sector are very rarely offered a traditional defined benefit pension – where the employer guarantees you a certain level of pension based on your salary and length of service.

Most employer-based pensions now depend on how much you and your employer have contributed and the investment returns achieved by that money. That said, for most people, saving via a workplace pension still remains the correct approach to take for building a retirement nest egg – not least because the employer contributions are effectively free money.

A NUMBER OF ATTRACTIVE TAX BREAKS

Importantly, pension savers benefit from a number of attractive tax breaks, including Income Tax relief on contributions and up to 25% of the proceeds being tax-free. For 2019/20, the annual limit on tax-relievable personal contributions is 100% of your salary (or £3600 if more). In addition, there is a limit on tax-efficient pension funding called the 'annual allowance' (£40,000 for most people) – this applies to both contributions paid by you and contributions paid by your employer and, if exceeded, means you will pay tax on the excess (an annual allowance charge).

We'll help keep track of your pension contributions so that you know if you're getting close to your annual limits.

MAXIMUM TAX-FREE RETIREMENT SAVINGS

In some cases, we may be able to ask your pension provider to pay the charge from your pension benefits. You may not be subject to an annual

allowance charge (or a lower charge may apply) if you have unused annual allowances from the previous three tax years that can be carried forward.

Increasingly, more people are also being caught by the 'lifetime allowance', which puts a limit on the total value of their pension funds that can be accumulated without suffering a tax charge. From 6 April this year, the pensions lifetime allowance increased to £1,055,000. The pension lifetime allowance is the maximum amount that you can accumulate in your pension plans without suffering a tax charge (lifetime allowance charge). ◀

‘TOP 5’ LIST OF PLANNING AREAS

Making sure you use up any allowances you are entitled to is the first step to reducing the amount of tax you may be liable to pay. We’ve provided our ‘Top 5’ list of planning areas to consider before 5 April 2020, the end of the 2019/20 tax year. The rates given are correct for the 2019/20 tax year.

1. YOUR ISA ALLOWANCE: DON’T WAIT TO USE IT

There are many different types of Individual Savings Account (ISA), including Lifetime ISAs, Junior ISAs and Innovative Finance ISAs, although the best known are Cash ISAs and Stocks & Shares ISAs.

If you invest your full allowance early on during each tax year rather than at the end, your money will have a longer time to potentially grow tax-efficiently. This can add up to extra money in your ISA if you invest the maximum £20,000 allowance. Of course, not everyone will be in a position to invest £20,000 every April – but the more you put in, and the earlier you do it, the better off you can be.

2. TOP UP YOUR PENSION, BUT WATCH OUT FOR THE LIFETIME ALLOWANCE

Generally, the maximum amount that can be contributed tax-efficiently in total from all sources (for example, from you and your employer) each tax year is £40,000. Remember, to receive tax relief, your personal contributions can’t be any higher than your earnings (or £3,600 if more).

The lifetime allowance for most people is £1,055,000 in the tax year 2019/20. It applies to the total of all the pensions you have, including the value of pensions promised through any defined benefit schemes you belong to, but excluding your State Pension. If you take any excess amount above the lifetime allowance as a lump sum, it will be taxed at 55% (or 25% if taken as income or placed in drawdown).

3. MAKE USE OF GIFT ALLOWANCES

If you have a potential Inheritance Tax liability, there are ways of reducing this by making exempt gifts that are immediately outside of your estate. You can give up to £250 a year to as many people as you like. You can also give away up to £3,000 tax-free a year (but not to those who have had the £250 gift). If you don’t use this annual exemption, it can be carried over for the following year, but only up to a maximum

of £6,000. Gifts made at the time of a wedding or registered civil partnership are given tax-free allowances: £5,000 can be given to a child; £2,500 can be given to a grandchild or great grandchild; £1,000 can be given to anyone.

If you can show that regular gifts were funded out of surplus income, not savings, you won’t pay Inheritance Tax. But it’s a complicated matter to prove, and on your death your personal representatives will need to provide evidence of your incomings and outgoings to demonstrate that the gifts were paid for out of surplus income, not from savings or investments.

4. THE PERSONAL ALLOWANCE: HOW NOT TO LOSE IT

Everyone has a basic personal tax-free allowance. This is the amount of income you can receive tax-free each year. You do not normally need to do anything in order to receive this, as it should automatically be applied when you are paying tax. If you earn over £100,000, this will be reduced, but otherwise it is £12,500 (2019/20 tax year).

If you are married and have used up your personal allowance, but your partner has not, it may be beneficial to transfer some savings or other assets into their name, but you need to bear in mind they will then legally own those assets. Or you can make use of the Marriage Allowance, which allows 10% of a non-taxpayer’s personal allowance to be transferred to their basic-rate taxpaying spouse.

5. DON’T FORGET CAPITAL GAINS

The annual exemption is £12,000 for 2019/20. If you have unrealised gains, you may decide to dispose of some before the end of the tax year to use up your annual exemption. Married couples are taxed individually on capital gains, so transferring an asset from one spouse to another before realising a gain can be tax-efficient as long as the transfer represents a genuine gift from one to the other. As far as possible, it

is important to use the annual exemption each tax year because, if unused, it cannot be carried forward.

When you sell a property that qualifies for the main residence tax relief, you do not have to pay Capital Gains Tax (CGT) on it. This main residence relief is extended for 18 months after you vacate the property. What this means is that you can sell your family home within a year-and-a-half of moving out of it and still qualify for the main residence relief (that is, pay no CGT). ◀

MINIMISE THE AMOUNT YOU PAY IN TAXES, NOW AND IN THE FUTURE

The goal of tax planning is to arrange your financial affairs so as legitimately to minimise the amount that you or your family will pay in taxes, now and in the future. Although it shouldn’t drive your overall financial planning strategy, it’s a key part of the process. We can help you decide what’s right for you. To find out more, please contact us.

TURNING PENSIONS INTO MONEY YOU CAN USE

Today, you've got a number of options and permutations available when it comes to what to do with your pension in retirement. But lots of choice can also mean increased confusion.

Your retirement might seem like a far-off prospect, but knowing how you can access your pension pot can help you understand how best to build for the future you want.

You must have reached a certain minimum pension age set by your pension fund provider to access your pension pot – usually 55 years if you have a defined contribution pension – at which point you have the choice of how to take your pension.

In some instances, you may be able to withdraw your pension earlier if you're retiring because of poor health or disability, but the rules depend on your pension scheme.

When you take your pension, some will be tax-free, but the rest is taxed. Please be aware that tax depends on your circumstances, and the tax rules can also change in the future.

Whatever approach you take, each option has its own upsides, downsides and tax implications. It depends on what you want out of life, how you choose to live and how much you want to leave behind.

With all of the options, you can normally take up to 25% of your pension pot as a tax-free lump sum if you wish to do so. The rest is then taxed as income at the point you receive it. We can make sure that you fully understand the tax implications of each option available to you so that you are fully informed.

TIME TO CONSIDER YOUR OPTIONS?

How long your pension pot lasts will depend on the choices you make. You'll be able to access the money within your pension pot in a number of different ways. We've provided some of the options to help you think your pension strategy through. You don't have to stick to just one option, as you could combine several. Some products may not offer the full range of options.

We're not recommending one over the other, but we can support you when the time comes to make your decision.

GUARANTEED INCOME FOR LIFE (ALSO KNOWN AS AN 'ANNUITY')

You can use your pension pot to buy an income for life. It pays you an income and is guaranteed for life. These payments may be subject to Income Tax.

In most cases, you can take up to 25% of the money you move into your guaranteed income for life, in cash, tax-free. You'll need to do this at the start, and you need to take the rest as an income.

TAKE FLEXIBLE CASH OR INCOME (ALSO KNOWN AS 'DRAWDOWN')

In most cases, you can take out up to 25% of the money moved into your flexible cash or income plan, in cash, tax-free. You can either

move your total fund into drawdown and take all of your tax-free lump sum at the start, or you can move portions of your fund into drawdown at different times and take 25% of each portion as tax-free cash over time. You can then make future withdrawals from the drawdown pot as and when you like.

You can also set up a regular income with this option. Any money you take after the first 25% may be subject to Income Tax. You can invest the rest in whichever fund or funds you choose, giving your money the chance to grow. Although as with all investments, it could go down in value too, and you could get back less than you put in.

WITH ALL OF THE OPTIONS, YOU CAN NORMALLY TAKE UP TO 25% OF YOUR PENSION POT AS A TAX-FREE LUMP SUM IF YOU WISH TO DO SO. THE REST IS THEN TAXED AS INCOME AT THE POINT YOU RECEIVE IT.

TAKE YOUR MONEY AS CASH

You can do this all in one go, or as a series of smaller lump sums, while the rest remains in your pension fund. Once you receive your money after tax, you're completely responsible for it and can use it as you want.

If you do opt for smaller lump sums without taking your tax-free cash up front, then each payment will be 25% tax-free. The remainder will be added to your income for the year and taxed accordingly, which may result in you paying a higher rate of tax.

A COMBINATION OF OPTIONS

You don't have to choose one option – you can take a combination of some or all of them over time, even if you've only got one pension pot.

Before combining any options, though, take time to think about the benefits and considerations of each option on its own. We'll check with your providers to see that you're not losing out on any guarantees on your plan by combining options.

LEAVE IT WHERE IT IS

If you don't need to take any money out, you can leave it in your pension pot to give you more time to decide what to do with it, or give your pot a chance to keep growing – but while it's invested, it could go down as well as up in value, and you might get back less than you put in.

And if you're still paying into your plan, you can keep paying into it and potentially benefit from

tax relief. You can then choose how to access your money when the time is right for you.

ONCE YOU'VE MADE A DECISION

When deciding what to do with your pension pot, it's important to remember that each option might have different tax implications, and that pension providers offer different products with alternative options or features including the product terms, rates, funds or charges that might be more appropriate for your individual needs and circumstances.

If you're like most people, the money in your pension pot will need to last for the rest of your life. Once you've made a decision, you might not be able to change your mind. So it's important to get all the information you need to feel confident that you're making the right decision for you. ◀

A PENSION IS A LONG-TERM INVESTMENT.

THE FUND VALUE MAY FLUCTUATE AND CAN GO DOWN, WHICH WOULD HAVE AN IMPACT ON THE LEVEL OF PENSION BENEFITS AVAILABLE.

ACCESSING PENSION BENEFITS EARLY MAY IMPACT ON LEVELS OF RETIREMENT INCOME AND YOUR ENTITLEMENT TO CERTAIN MEANS TESTED BENEFITS AND IS NOT SUITABLE FOR EVERYONE. YOU SHOULD SEEK ADVICE TO UNDERSTAND YOUR OPTIONS AT RETIREMENT.

PENSIONS ARE NOT NORMALLY ACCESSIBLE UNTIL AGE 55. YOUR PENSION INCOME COULD ALSO BE AFFECTED BY INTEREST RATES AT THE TIME YOU TAKE YOUR BENEFITS. THE TAX IMPLICATIONS OF PENSION WITHDRAWALS WILL BE BASED ON YOUR INDIVIDUAL CIRCUMSTANCES, TAX LEGISLATION AND REGULATION, WHICH ARE SUBJECT TO CHANGE IN THE FUTURE.

THE VALUE OF INVESTMENTS AND INCOME FROM THEM MAY GO DOWN. YOU MAY NOT GET BACK THE ORIGINAL AMOUNT INVESTED.

PAST PERFORMANCE IS NOT A RELIABLE INDICATOR OF FUTURE PERFORMANCE.

Protecting what matters

THOSE DEAREST TO US, AND THOSE FINANCIALLY DEPENDENT UPON US

If something should happen to you, the last thing you want is for you or your family to be worrying about money. One of the most important aspects of your financial planning should be to ensure that you've made provision for your family and any dependants in the event of a serious illness, injury or untimely death.

Financial planning is not only about fulfilling our needs and aspirations, but it is also about protecting those dearest to us, and those financially dependent upon us. Of course, illnesses and deaths are not things that we like to think about, but failing to protect against such eventualities can have severe consequences for our loved ones, from struggling to pay the mortgage to a potential Inheritance Tax bill.

Here are just some of the policies that need to be considered.

LIFE ASSURANCE

Generally speaking, anybody with dependants or an outstanding mortgage should look at taking out a life assurance policy. At the very least, this should cover any borrowing and ensure the family can keep their home, but preferably it should provide an additional sum to help cushion the shock to your family finances at such a difficult time.

The level of cover should match your specific circumstances, which means it's crucial to choose the right term and sum to insure. And by putting the benefits paid on death into an appropriate trust, this can be a very useful way of ensuring they are passed on to the intended beneficiaries at the right time. The proceeds also won't form a part of your estate when considering any Inheritance Tax liabilities.

INCOME PROTECTION

Being unable to work can quickly turn your world upside down. These policies typically pay out between 50% and 60% of your salary, tax-free, if you are unable to work due to illness or injury. They are an essential form of cover for those with dependants, but the terms and conditions vary – some pay out until retirement or death, others until you return to work. Almost all will only pay out once a pre-agreed period has passed, ranging from three months to a year.

Some policies will also only pay out if you cannot return to your own occupation. Others pay out only if you are incapable of doing any job. So it's important that you obtain professional financial advice to make sure the right policy is put in place for your needs.

These plans typically have no cash-in value at any time, and cover will cease at the end of term. If premiums stop, then cover will lapse.

CRITICAL ILLNESS

This cover gives you the comfort that, should you face a terminal diagnosis or a specified critical illness, your policy pays out a tax-free lump sum as opposed to an income. Critical conditions include suffering a heart attack, stroke and certain types of cancer – but each policy will have its own definitive list.

Typically, the proceeds are used to fund paying off a mortgage and any other debts, or they could be used to pay off school fees that are no longer affordable or to provide a financial legacy. ◀

IF THE PLAN HAS NO INVESTMENT ELEMENT IT WILL HAVE NO CASH-IN VALUE AT ANY TIME AND WILL CEASE AT THE END OF THE TERM. IF PREMIUMS ARE NOT MAINTAINED, THEN COVER WILL LAPSE.

CRITICAL ILLNESS PLANS MAY NOT COVER ALL THE DEFINITIONS OF A CRITICAL ILLNESS. THE DEFINITIONS VARY BETWEEN PRODUCT PROVIDERS AND WILL BE DESCRIBED IN THE KEY FEATURES AND POLICY DOCUMENT IF YOU GO AHEAD WITH A PLAN.
